

GANESH VISHWAKARMA

Senior Angular Developer

Mumbai, India | vishwakarma.ganesh15@gmail.com | +918898634832
<https://www.linkedin.com/in/ganesh-vishwakarma-512a99102/> | <https://github.com/Dev-AlienX>

PROFESSIONAL SUMMARY

Senior Angular Developer with 7.6 years of experience building scalable pixel-perfect enterprise web applications, live bidding SaaS Platform, and Low-Code/No-Code products. Proven track record of owning end-to-end frontend delivery, including architecting an Auction module supporting 100+ concurrent users, 30+ lots, and 50+ line items per session. Strong expertise in Angular, TypeScript, JavaScript, RxJS leveraging these technologies to improve live Auction performance by 40% and overall module performance by 25%. Experienced in technical leadership, CI/CD release, mentoring engineers, and accelerating delivery through AI-assisted development.

SKILLS

Programming Languages: TypeScript, JavaScript.

Frameworks: Angular 14+, AngularJS, Bootstrap, Tailwind CSS, Angular Material.

library: RxJS, chart.js, Anime.js, Lodash, AG Grid.

Web Development: HTML5, CSS3, SCSS, SASS.

Tools: webpack, rsbuild, and esbuild, Angular CLI, GitHub Copilot, Claude, GPT.

Platform & Testing: GitHub, Git, SonarQube. Manual Testing, Automation Testing, Unit Testing Sanity.

Architecture: plugin Architecture, micro Frontend, Domain-Driven Design (DDD) with NX, Single Page Application (SPA), RESTful API integration.

CI/CD & Delivery: GitHub Action, Azure DevOps Pipelines, Platform as a Service (PaaS), Software as a Service (SaaS).

PROFESSIONAL EXPERIENCE

Senior Software Engineer | Angular | GEP Worldwide, Navi Mumbai, India *Jun 2023 - Present*

- Boosted live-auction performance by 40%, page crash rate from 90% to near 0, and secured 100% data preservation for 100+ concurrent users by re-architecting an Angular and RxJS state management, resolving critical memory leaks, and leveraging AG Grid caching to stop background Pusher WebSocket syncs from wiping up to 50 lines item grid input.
- Architected a fully configurable, reusable notification plugin from scratch that efficiently manages a matrix of 400+ dynamic messages via a centralized client-side state management system; engineered complex real-time features including pagination, infinite scroll, single/bulk clears, and scroll-bound unread alerts.
- Architected and deployed a highly configurable "Manage Column" feature used across multiple enterprise modules, empowering users to completely customize data grids via an abstract engine that supports dynamic input types (computed, text, dropdown, attachments), visibility toggles, and ranking criteria.
- Lead the frontend development and Agile sprint execution for the enterprise auction module, owning requirement analysis, technical grooming, and the direct mentorship, KT, and code review workflows for a team of 3-4 junior developers.
- Optimized overall auction platform performance by 25%-including a 10% reduction in page load time-by implementing Angular lazy loading, OnPush change detection, and state management best practices.
- Resolved 200+ Jira tickets-including 40+ critical production blockers-by utilizing Chrome DevTools and Angular debugging techniques to rectify complex state management and RxJS data-flow issues, ensuring continuous system stability and zero business downtime.
- Facilitated continuous delivery by actively participating in 30+ production and 40+ UAT releases, executing Azure Pipelines for CI/CD processes to ensure seamless frontend deployments and zero-downtime rollouts.

- Built and optimized 230+ reusable module plugins (components and services) on a Plugin-Based Architecture, configurable plugins, integrating them into a drag-and-drop low-Code No-Code platform.
- Increased personal coding efficiency and feature delivery speed by 45% through the strategic integration of AI-assisted development tools like GitHub Copilot and Claude.
- Spearheaded the seamless migration of the legacy codebase to Angular 20, leveraging AI tools to accelerate refactoring, adopt Standalone Components and Signals, and significantly reduce technical debt.
- Achieved strict compliance with WCAG accessibility standards across all newly built pages and plugins-while also refactoring the old codebase-by implementing semantic HTML and ARIA attributes.

Software Engineer | GEP Worldwide, Navi Mumbai, India

Jul 2020 - May 2023

- Built and optimized a library of 25+ reusable Angular UI components (grids, inputs, banners) from UX designs, driving development consistency and accelerating feature delivery.
- Translated complex UI/UX workflows into a pixel-perfect SaaS application by engineering a responsive custom grid UI using CSS Flexbox with advanced row and column spanning.
- Integrated RESTful APIs into the Angular front-end to enable seamless data flow and dynamic user experiences.

Associate Web Engineer | GEP Worldwide, Navi Mumbai, India

Jul 2019 - Jul 2020

- Built proficiency in AngularJS, TypeScript, and SCSS to support enterprise application development and UI enhancements, strengthening core frontend engineering fundamentals.
- Delivered tailored client demonstrations by collaborating with the UX customizing product UI and integrating mock JSON data, improving customer engagement during pre-sales cycles.
- Collaborated with senior engineers and cross-functional teams to build practical knowledge of enterprise application architecture and reusable component design.

Frontend Developer | GEP Worldwide, Navi Mumbai, India

Dec 2018 - Jun 2019

- Partnered with the UX team to implement responsive designs and visual changes for client demos.
- As an intern, developed foundational web and frontend engineering skills (HTML CSS SCSS JavaScript) that supported progression into enterprise application delivery.

PROJECTS

The Unsubscribables - personal project (**theUnsubscribables**)

- Created this project to experiment with the RxJS in Angular.
- Explored Observable, Observer, Subject, BehaviorSubject, ReplaySubject, and RxJS operators.
- Used Playwright for end-to-end testing coverage.

Still Not Shiny - Pokémon Pokédex (**stillNotShiny**)

- Built an Angular 22 application using Signals, Standalone Components, built-in control flow, lazy-loaded routing, guards, and resolvers.
- integrated the public Pokémon REST API and an HTTP interceptor for token-based authentication, authorization, and secure request handling.

EDUCATION & ADDITIONAL INFORMATION

Education: Master of Computer Applications (MCA) - NCRD's Sterling Institute of Management Studies, Navi Mumbai – 2019.

Experience: 7.6 Years.

Availability: Immediate Joiner.

Location: Thane, Maharashtra, India.

Languages: English, Hindi, Marathi, Bhojpuri
